Education

KLE Technological University — Vidyanagar, Hubballi
Bachelor of Engineering in Electronics & Communication — *Jan 2021 – Jul 2025*

- CGPA: 9.24/10

Experience

AI Engineer — November 2025 – Present
Scoriant AI — *Banglore, India*

- Fine-tuned large language models using LoRA and QLoRA, reducing memory usage by 35% while preserving model performance
- Engineered NLP pipelines for classification, summarization, and information extraction, improving inference accuracy by more than 5% across domain-specific datasets
- Applied parameter-efficient fine-tuning techniques to adapt foundation models, reducing training time by 40% compared to full fine-tuning
- Trained YOLO-based visual intelligence models for real-time object detection on edge and GPU platforms, achieving 90% accuracy
- Automated visual inspection and manual lookup workflows using trained computer vision models, reducing manual scanning effort by 40%

Acubiq — Jan 2025 – September 2025
Embedded Machine Learning Intern — *Huballi, India*

- Developed a machine learning model to adapt to human movement in VR streams using Unreal Engine, achieving 90% accuracy
- Designed and integrated a real-time ML inference pipeline for human motion analysis in Unreal Engine, improving movement adaptation accuracy by 25%
- Engineered a modular ML architecture for processing VR motion data and generating adaptive responses, reducing inference latency by 30%

Projects

Hybrid Transformer – CNN ASR Model | *Python, PyTorch, Transformers, NLP* — May 2024 – Nov 2024

- Designed a hybrid Transformer–CNN automatic speech recognition architecture, achieving a 2.58% Word Error Rate on the LJ Speech dataset
- Implemented an MFCC-based audio preprocessing pipeline and trained the model for 100 epochs with a focus on computational efficiency
- Achieved performance comparable to state-of-the-art ASR models while optimizing resource utilization for efficient training and inference

Latent Space Representation for 3D Point Clouds | *Python, PyTorch, PointNet, GNN* June 2023 – October 2023

- Built a latent embedding pipeline for 3D point cloud classification and segmentation, improving benchmark accuracy by 8%
- Implemented PointNet, PointNet++, and graph neural networks for geometric feature extraction, achieving a 20% improvement in feature representation efficiency
- Optimized 3D deep learning workflows to reduce computational overhead by 30% and inference time by 25% across benchmark workloads

Achievements & Certifications

Research Publication: Published "Enhanced Slice Aware Energy Optimization in 5G Networks using Simplicial Homology: A Comprehensive Framework" & "Enhancing Speech Recognition: A Fusion of Transformers with Convolutional Context"
Academic Achievement: Gold Medalist and 1st Rank, Department of Electronics and Communication Engineering (Industry Integrated); ISRO Space Science and Technology Training (2023)
